December 1st, 2015

Dear Grower,

Please be thinking of what varieties and quantities of Generation zero (G0) seed potatoes you will be requesting from the Plant Materials Center (PMC) for planting on your farm in 2017. In order to establish our greenhouse production plans for 2016 at the PMC, we will be accepting order requests until January 31, 2016. To encourage high quality seed in Alaska potato production we encourage you to renew your seed stocks as often as possible with disease free seed from the PMC. In this regard, we are here to serve you and provide the industry with a healthy start.

Please review the attached list of available material and visit <http://plants.alaska.gov/PotatoSeedProduction.html> for ordering information. The attached list represents 36 varieties which have seen order activity in Alaska in the past four years. If you do not see a variety that interests you please contact us to explore future possibilities. Based on production logistics, we are setting a minimum order limit of five pounds per variety. The price per pound will remain the same as last year, \$12.00/lb.

Please do not hesitate to contact us with any questions.

Sincerely,

Christine Macknicki
Potato Program Technician
